

Topic #3: Framework for Materials Development

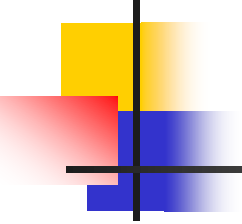

In developing materials, there are, at least, five factors must be considered :

1. Students needs an characteristics
2. Approaches to language teaching
3. Syllabuses
4. Techniques
5. Exercises

1. Approach: ways of defining what the students need to learn based on

assumptions and theoretical positions drawn from various disciplines, such as linguistics, psychology, and education

Syllabuses: selecting and organizing
instructional contents(materials) based on
needs analysis

3. Techniques: ways of presenting materials
based on the approach used

4. Exercises: a set of activities given to students in order that they can achieve the objectives formulated in the syllabus

The relationship between approach, syllabus/design and techniques

Task: Discuss the following questions

1. Is there any connection between theories and practices of materials development?
2. What constitute good materials for teaching?
